PROJECT SCHEDULE & MILESTONES

Developer: [Left Blank] | OptiCrop Project Documentation
Repository: https://github.com/goutham-05-raj/OptiCrop-Smart-Agricultural-Production-Optimization-Engine

1. Implementation Milestones

The table below outlines the implementation schedule and phase breakdown for the OptiCrop project:

06 july 2026

Phase ID	Milestone Task	Estimated Duration	Target Date
M1	Environment setup and dependency checks.	1 Week	June 8, 2026
M2	Preprocessing agricultural data and training models.	2 Weeks	June 22, 2026
M3	Developing Flask routes and integrating backend code.	2 Weeks	July 6, 2026
M4	Designing responsive glassmorphic templates.	1 Week	July 13, 2026
M5	System testing and local server deployment.	1 Week	July 20, 2026

Opticrop - Project Milestones

M1 Environment setup, virtual env, pip install requirements [Done]
M2 Dataset generation (generate_datasets.py, 2200 records) [Done]
M3 Model training & comparison (KNN / DT / LR / RF) [Done]
M4 Flask server: routing, validation, CSV logging [Done]
M5 Frontend: Jinja2 templates, CSS glassmorphism cards [Done]
M6 Testing: unittest suite (4 tests passed), final review [Done]

2. Resource Management

Work was distributed to ensure model validation is completed before UI templates are built. Git version control tracks source edits throughout development.
