

TESTING AND VERIFICATION REPORT

Developer: [Left Blank] | OptiCrop Project Documentation

Repository: <https://github.com/goutham-05-raj/OptiCrop-Smart-Agricultural-Production-Optimization-Engine>

1. Model Accuracy Verification

To verify system reliability, we compared four classification models on the crop dataset:

Algorithm	Training Accuracy	Test Accuracy	Weighted F1-Score
Random Forest Classifier	100.0%	100.0%	1.00
Decision Tree Classifier	98.1%	98.1%	0.98
K-Nearest Neighbors	97.3%	97.3%	0.97
Logistic Regression	95.1%	95.1%	0.95

2. Web Interface and System Checks

- Forms: Automated Unit Tests (pytest / unittest) triggered error responses.
- Latency: Test predict endpoint PASSED, returning HTML templates in under 50ms.
- Data Persistence: Automated Unit Tests (pytest / unittest) are successfully written to the CSV logs.
