

## Brainstorming & Idea Prioritization Template

|                      |            |
|----------------------|------------|
| <b>Date</b>          | 04-07-2026 |
| <b>Team ID</b>       |            |
| <b>Project Name</b>  | Opticrop   |
| <b>Maximum Marks</b> | 3 Marks    |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member | Idea / Suggestion | Category | Group No. |
|------|-------------|-------------------|----------|-----------|
| 1    | D.Goutham   |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |
|      |             |                   |          |           |

### 2. Project Overview

#### Purpose

#### Features

- ? Smart crop recommendation based on soil nutrients (N, P, K) and environmental parameters
- ? Crop suitability and environmental assessment for a given set of conditions
- ? Support for agricultural research and policy planning through data-driven pattern analysis
- ? Interactive, responsive web interface for entering parameters and viewing instant predictions
- ? Trained model persistence using Pickle (.pkl) for fast reuse during prediction
